Category:Near Field Communication (NFC)

Near Field Communication, more commonly referred to by its acronym of NFC, is a very short-range radio technology. It enables communication between an NFC reader and NFC tag when they are typically closer than 4cm from one another.

This category page provides links to wiki topics about NFC technology and related development tools and development technology offered by Nokia. For an overview of NFC information on the wiki and this site see About NFC. Other site and community resource are available on the main NFC site entry point, including the more complete overview Introduction to NFC.

For general principles and "getting started" wiki topics see:

- About NFC
- Connection Oriented NFC LLCP connection
- Developing NFC Applications
- Differences among different NFC tags
- Inside NFC: Usages and Working Principles
- NFC Handover working principle
- Understanding NFC Data Exchange Format (NDEF) messages
