Application panics on exit after importing contact from phonebook on Nokia N97 mini (Known Issue)

Overview

The application panics with **KERN-EXEC 3** on exit after importing a contact from the phonebook on the Nokia N97 mini. The crash is not encountered when a contact number is entered manually.

Description

This can be tested by creating a simple form containing a text field to import a contact from the phonebook using `TextField.PHONENUMBER`. After importing the contact, the application crashes with **KERN-EXEC 3** on exit on the Nokia N97 mini. The same application exits without crashing if the contact number is entered manually.

Solution

No solution available.
