When constructing a Browser Control instance, there is a change in the parameters passed to CreateBrowserControlL() between S60 3rd Edition and S60 3rd Edition. Feature Pack 1 devices.

Description

The second parameter passed to CreateBrowserControlL(), aRect is interpreted differently in these two platform releases:

- In S60 3rd Edition devices aRect is related to view.
- In S60 3rd Edition, Feature Pack 1 devices aRect is related to the container owning the browser control.

Solution

The value of aRect should be set as follows:

```
TRect brCtlRect(Position(), Size()); // in 3rd Ed devices
TRect brCtlRect(TPoint(0, 0), Size()); // in 3rd Ed, FP1 devices

CBrCtlInterface* iBrCtlInterface = CreateBrowserControlL( this, brCtlRect, aBrCtlCapabilities );
```
