Creating an informatica website using mobile web templates

Introduction

Web Templates are resources which we can use to design our websites easily and quickly. Nokia Mobile web templates are a series of web templates provided by Nokia Developer using which we can make good websites for Nokia devices.

The article shows how Nokia Mobile Web Templates can be easily customized to create high quality mobile website. The Nokia Mobile Web Templates provide a wide range of mobile web components which can be fully customized to create a mobile website or a WRT widget application.

Detailed information about the templates is available at...

- High-end Templates and Layout Samples for High-end Devices
- Mid-range Templates and Layout Samples for Mid-range Devices
- Low-end Templates and Layout Samples for Low-end Devices

Benefits of Web Template

A Web Template is a ready-made website that will allow you to create high-quality websites in a fraction of the time. Why web templates make sense in web design:

Speed - Web Templates Speed Up The Web Design Process

The most time consuming part of the process (of web design) is during the initial design phase where the client and web designer go back and forth trying to come up with the look the client wants. This increases cost more than you would like to think ...

A web template turns a complex process into something simple:

1. The client selects the style they want from a collection of web templates.
2. Once the client makes their choice, any half competent web designer can easily customize the template to the client's needs.

Cost - Web Templates Drastically Reduce Cost

It's not the easiest thing to find quality web designers – many suck. Using templates allows you to purchase a world-class website without having to pay the high dollar cost that is usually associate with that level of design.

Since anyone reasonably comfortable with web design can edit and modify a web template, there is no reason to have to pay thousands of dollars on a world-class designer.

Brief Web Design Tips

- Avoid Under Construction signs
- Don't use a hundred different fonts on the same page
- Don't write your HTML to a particular browser - Browsers change very quickly
- Use style sheets - Style sheets (known as CSS)
- Include Meta Tags - Meta tags are used to tell the outside world, especially search engines, all about your pages.
- Include a descriptive title - Be sure and write a short
- Avoid lots of moving things

Customizing Nokia Mobile Web Templates

The Nokia Mobile Web Templates offers a range of Web Components to create various types of web pages.

In this application, we have made use of the mentioned Nokia mobile web components (Mid-range devices) :

- Marquee
- Advertisement
- Breadcrumbs
- Blockquote
- Boxes
- Content
- List
- Link
- Tables with/without border

(C) Copyright Nokia 2013. All rights reserved.

- Images with/without border
- Header [Branding]
- Footer navigation
- Home & Top navigation
- Horizontal navigation bar

Layout of the mobile web site

Home Page

MARQUEE

```
<h6><marquee>Temples to the world</marquee></h6>
```

ADVERTISEMENT

```
<div class="advertisement">

 <span><h6><div align="center"><font>ADVERTISEMENT [Click on it]</font></div>
 <marquee><h2><a href="../library/ipod_f.html">For the up coming Tour Place Suggestion</a></h2>
 </marquee>
 </h6></span>
</div>
```

Photo Gallery

This page is come from **HOME Page** as....For the up coming tour place
