Overview

Reusing icons from the Contacts application

Description

The following code demonstrates how to load the icons used in the Contacts application (in this case, the symbol for the Groups view):

```
#include <pbkiconinfo.h>    // link against pbkview.lib
#include <gulicon.h>        // link against egul.lib
CPbkIconInfoContainer* iconContainer = CPbkIconInfoContainer::NewL( iCoeEnv );
CGulIcon* icon = iconContainer->LoadBitmapL( EPbkqgn_prop_group_open_tab1 );
```

See pbkiconid.hrh for other icon IDs.
