Archived:Suppressing errors is not possible when sending the message fails

Archived: This article is archived because it is not considered relevant for third-party developers creating commercial solutions today. If you think this article is still relevant, let us know by adding the template {{ReviewForRemovalFromArchive|user=~~~~|*write your reason here*}}.

Overview

When sending a message (for example, SMS or MMS) fails for some reason (for example, a network-related problem), a notification indicating that sending the message failed is always displayed.

This feature may cause problems when trying to send a message automatically to make the application transparent. The notification comes from the message server and it cannot be suppressed.

Solution

Currently no solution available.
