Category:Qt Quick

This page presents all the articles in the Nokia Developer Wiki that include the category **Qt Quick**, which is a sub-category of Qt.

Qt SDK v1.2 is released (01 Feb 2012): The Qt SDK delivers a complete toolset that supports the creation of apps for the Nokia N9 and Symbian Anna and Belle phones. The Qt SDK 1.2 delivers Qt Creator 2.4.1 and enhanced tools for Symbian and Nokia N9 apps. For developers of desktop applications, Qt 4.8 is included.

For more information about the release see Qt SDK 1.2. You can download Qt SDK from here:Qt SDK

Qt Quick is a UI creation technology designed to enable developers and UI designers to work together to create animated, touch-enabled UIs and applications. While you can fully create and customise your own UI in Qt Quick, many users will want to use Qt Quick Components. The components provide a complete declarative application framework for Qt Quick - making it easy to create applications with the platform look and feel.

Qt Quick consists of:

- QML: An easy-to-use language based on JavaScript that developers and UI designers can use to describe how a UI looks and behaves – with no C++ knowledge required.
- Qt Creator: A shared tool for developers and designers in which they can create and work with Qt Quick projects.
- Qt Declarative: A new Declarative module in the Qt library that provides the engine for building dynamic custom UIs and to extend QML applications with C++.

In addition to the articles here, please see the Qt Quick page on the Qt website.
