Mobile Design Patterns: Screen Transitions

This design pattern is part of the Mobile Design Patterns series.

Description

Transition means, "The act of passing from one state to the next". This section describe different type of transitions you can provide on phones. An interesting transition gives that extra touch to your device. Transitions mainly occur as effect of events, which can be key events or touch. You can choose your screen transition on basis of how you want your next data to be presented, and how the transition adds effect to your application.

Screen Slide Away Transition

As 'Applications' folder is selected the screen transition happen by screen moving out horizontal left. And then on selection of 'Back' it slides in from Left. Direction of screen out can be different.

Screen Zoom in and out Transition

As 'Application' folder is selected the screen transition happen by screen zooms out. And then on selection of 'Back' it zooms in.
