Using hot keys for browsing

This article shows how to enable hot key detection in your Java ME application; hotkeys can make it much easier to navigate a mobile application by, for example, reducing the effort to jump between links in a browser.

Source code

```
import javax.microedition.lcdui.Alert;
import javax.microedition.lcdui.AlertType;
import javax.microedition.lcdui.Canvas;
import javax.microedition.lcdui.Display;
import javax.microedition.lcdui.Graphics;
import javax.microedition.midlet.MIDlet;

public class HotKeyCanvas extends Canvas {
 MIDlet m_midlet;
 Display display;
