

Category:Known Issue

This category page is for **Known Issues** - defects and workarounds on Nokia Platforms. The category contains many articles that pre-date the creation of bug trackers shown in the "See Also" on the page right hand side. In general you should avoid creating Known Issues, instead create defect reports and including workarounds in those reports. Known Issues are primarily for when you have also discovered a workaround or an issue that can't be posted in the above BTS systems (for whatever reason).

Note: Nokia Technical support teams will occasionally still create new Known Issues for defects that have been reported in *internal* defect databases.
