Overview

The S60 platform is a purpose-built platform for smartphones on Symbian OS. It is currently one of the leading mobile platforms in the world. The S60 platform is a complete smartphone reference design, developed by Nokia Mobile Software, and is currently being licensed by several of the worlds key mobile device manufacturers

The S60 platform guarantees to developers that specific elements will be present in every device based on a particular platform edition and feature pack. It does this using the architecture shown in Figure 1, which consists of the S60 UI style, S60 Applications, S60 Application Services, S60 Java™ Technology Services, S60 Platform Services, and Symbian OS Extensions built on top of Symbian OS.

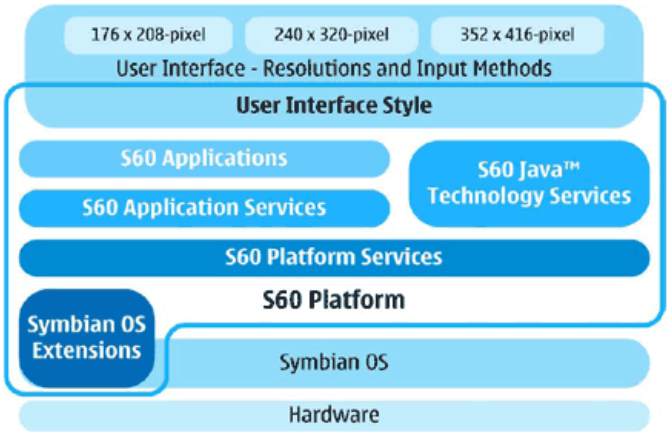

Figure 1. A schematic diagram of the S60 platform architecture is shown.
