Record Management System (RMS)

The **R**ecord **M**anagement **S**ystem (RMS) is and API used for storing persistent data in Java ME.

A record store consists of a collection of records which will remain persistent. The RMS API abstracts the device-dependent details of the storage area and access to those details, and it provides a uniform mechanism to create, destroy, and modify data.

Sample code

- How to store Data in RMS
- Record sorting in RMS
- How to Store Images into RMS & Fetch from RMS
- Cache images in RMS
