Archived:N-Gage

Archived: This article is **archived** because it is not considered relevant for third-party developers creating commercial solutions today. If you think this article is still relevant, let us know by adding the template {{ReviewForRemovalFromArchive|user=~~~~|*write your reason here*}}.

N-Gage services have been discontinued. N-Gage games may be available through Nokia Store.

Introduction

The next-generation N-Gage platform is available in the Nokia N95, N93, N81 and N73 devices. It takes the high-quality gaming experience that users of the original N-Gage gamedeck devices enjoyed, and allows owners of a range of S60 smartphones to easily discover, purchase, play and share those games. The new platform is distinct from that found in the original N-Gage gamedecks, and targets S60 3rd Edition phones only.

Support for N-Gage is via the Nokia Developer PRO N-Gage Zone, accessible by invitation only. The N-Gage platform SDK is not available to individual games developers.

The First Access system for N-Gage on the N81 8GB has been launched. This is clearly "work in progress", reviews and other articles should not be placed on the Wiki until these products are formally launched in final form. The Nokia Developer Wiki and the Discussion boards are not places for views and opinion on the N-Gage products and should be placed on the community website above.

These are NOT products for individual games developers and any other links,articles,documents or comment placed on Wiki will be removed to protect the Wiki from any action

NOTE:- the N95 is not currently supported and "PATCHED" versions of the launch code found on the internet may cause problems with any other models of phone may reset the phone and drain the battery.
