Archived:Offline profile not documented in S60 2nd Edition FP1 SDK Help (Known Issue)

Archived: This article is **archived** because it is not considered relevant for third-party developers creating commercial solutions today. If you think this article is still relevant, let us know by adding the template {{ReviewForRemovalFromArchive|user=~~~~|*write your reason here*}}.

The article is believed to be still valid for the original topic scope.

Overview

The offline profile is not documented in the SDK Help in S60 2nd Edition FP1.

Description

A new profile type "Off-line" is presented in S60 2nd Edition, Feature Pack 1. The active profile can be queried using the CSettingInfo::Get method with setting ID EActiveProfile. In S60 SDK 2.1, the documented values for EActiveProfile are 0 (general), 1 (silent), 2 (meeting), 3 (outdoor), and 4 (pager). The value 5 (offline) is missing from the SDK documentation. There are no set methods available in the CSettingsInfo API. S60 2nd Edition, Feature Pack 1 introduces support for off-line mode. However, the off-line mode requires additional implementation from the device as well. Every device based on S60 2nd Edition, Feature Pack 1 (at least the Nokia 7610) does not yet have the off-line mode available for the user. However, some devices, such as the Nokia 6620, do have it available for the user.

Solution

If the current profile is checked, the return value 5 (offline) should be handled as well. It might not be feasible to map the offline state to default behavior.
