Sandbox/Hamishwillee/ArticlesRequiringReview/Windows Phone

This sandbox lists Windows Phone articles that may need review or updating. Please do not edit.

Also see Sandbox/Hamishwillee/Reports/Windows Phone Updates for articles that need to be reverified against later versions

Articles which use ArticleNeedsUpdate template

Article	Type	Timestamp	User	Reason
Implementando publicidade usando Nokia NAX em aplicações Windows Phone	update	20131122002836	hamishwillee (talk)	Inneractive now work with Nokia developers directly. This article needs to be retested. All references to NAX should be removed as part of testing/update.
Getting started with Buddy services: Create your own location based social app	update	20131111221910	hamishwillee (talk)	The Buddy API changed completely since this article was written and the online documentation does not seem to be up to date. The article needs to be updated to reflect the current API. Ideally the ArticleMetadata "dependencies" information should list the version of the API for which it is accurate. Note also that the Nokia Premium Developer Program has been replaced by Nokia Developer Offers, and the information about free service calls is no longer true.
Implementing advert in Windows Phone app using Inneractive with CSharp	update	20131122002713	hamishwillee (talk)	Inneractive now work with Nokia developers directly. This article has been partially updated to refer to Inneractive, but needs to be retested. All references to NAX should be removed as part of testing/update.
Jogging - Calorie Calculator: Demonstrating Real World usecase of WP8 features	update	20130503054239	hamishwillee	The article has reported errors. There is no working zip file which makes it hard to verify the code, and it is not documented sufficiently to understand the code without such a zip file. IMO this therefore does not meet wiki quality standards. If a buildable project cannot be provided it should be deleted.
Detecting and handling multi-touch events in Windows Phone 7 applications	update	20130530051254	hamishwillee	The article is incomplete. To make this useful you would need to describe what the application is supposed to do, why it is useful, provide links to any source references you learned to created it (e.g. on MSDN) and also any tricks/tips associated with using this code - ie what if you want to detect multi-touch events on a map control as opposed to over the top of some other control. That way not only can people easily use your code, but they can work out when the code is not so useful, and extend it to other use cases. Jerry (see comments) also found it inconsistent.
Anatomia de um Tile	update	20121130045022	hamishwillee	Tiles have changed a bit in Windows Phone 8 - this is only up to date to Windows Phone 7.5
MiB With Inneractive	update	20131122002952	hamishwillee (talk)	Inneractive now work with Nokia developers directly. This article needs to be retested. All references to NAX should be removed as part of testing/update.
Windows phone诊断工具	update	20130719040400	hamishwillee (talk)	This tool only applies to Windows Phone 7.5. Original article has been updated.
