

# Archived:Adding a contact entry in Flash Lite

 Archived: This article is **archived** because it is not considered relevant for third-party developers creating commercial solutions today. If you think this article is still relevant, let us know by adding the template `{{ReviewForRemovalFromArchive|user=~~~~|write your reason here}}`.

We do not recommend Flash Lite development on current Nokia devices, and all Flash Lite articles on this wiki have been archived. Flash Lite has been removed from all Nokia Asha and recent Series 40 devices and has limited support on Symbian. Specific information for Nokia Belle is available in [Flash Lite on Nokia Browser for Symbian](#). Specific information for OLD Series 40 and Symbian devices is available in the [Flash Lite Developers Library](#).

This code snippet demonstrates how to use the Contact Service API in a Flash Lite 3.0 application to add a new contact entry to the calendar. Supported from S60 5th Edition onwards.

## Source

```
// Import Platform Service Interface
import com.nokia.lib.Service;

// Heading of the application
heading_txt.text = "Add Contact";

// Create a new Service object which has Calendar data
var contact = new Service("Service.Contact", "IDataSource");

// Define the Contact Entry (First name and Mobile number)
var Name = {Label:"First Name", Value:"Example"};
var mobile = {Label:"HomeMobile Phone", Value:"9999999999"};
var contactEntry = {FirstName:Name, MobilePhoneHome:mobile};

// Define the input parameters
var inParams = {Type:"Contact", Data:contactEntry};

// Define the result data
var outParams = contact.Add(inParams);

// Check if the add was a success
if (outParams.ErrorCode == 0) {
    text_txt.text = "Contact entry added!";
} else {
    var errorId = outParams.ErrorCode;
    text_txt.text += "\rError: "+errorId;
}
}
```

## Postconditions

The added contact information can be found from the default phonebook of the device.

## Example application

The following sample application has been tested in Nokia 5800 XpressMusic (S60 5th edition, Flash Lite 3.0).
