Overview

Blank dialog box appears when running a location-based MIDlet in Nokia E62.

Description

A blank dialog box appears when running a MIDlet in the Nokia E62. Only the "networking" confirmation dialog is blank but the "Bluetooth connectivity" confirmation has a proper message in it. There are no other applications running during this time. The problem can be reproduced with the (2.0618.06.17) firmware.

How to reproduce

Make a test MIDlet that uses low-level net access and tries to connect to a network.

Solution

This is expected to be fixed in the future firmware release. It will affect all Java MIDlets that use a low-level net access. The dialog is asking for a confirmation before connecting to the network automatically.
