Drop-Down Box Example

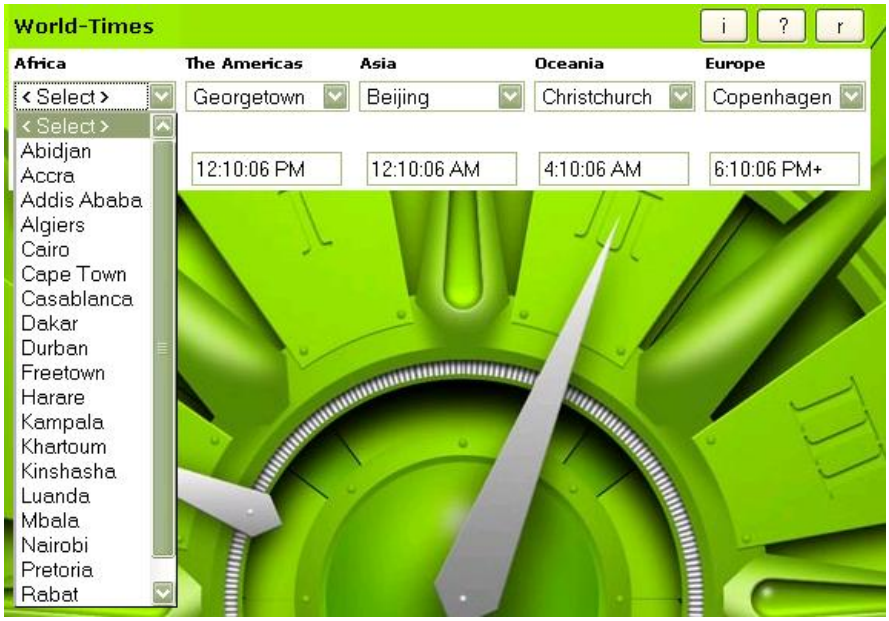
Introduction

The following World-Clock Widget Example shows how to use a Drop-Down Box. It shows how efficiently we can use a Drop-Down box, instead of other Controls that takes lots of space in mobile screen to display and force users to scroll the page.

World-Times: You can simultaneously view the time in 5 different cities covering 5 different continents. You are able to find out the time from a total of 91 given cities situated in the 6 major continents. Just choose the city and the time will automatically be displayed in the text box just below the respective drop down menu. This script supports Daylight Saving Time.

The Daylight Savings Time Rules are given below:

```
    * USA/Canada: (April - October)
    * UK/Europe: (March - October)
    * Australia: (October - March)
    * New Zealand: (October -March)
    * Russia: (March - September)
```



World-Clock Widget uses Drop-Down Boxes
