Get System information using Qt

Overview

This code example shows how to access system information from the device. Using this code we can get current language, current country code, available language, OS version, Qt lib version, Firmware, and other available features of the device. Code example use `QSystemInfo` API from `QtMobility` APIs. Basically the system information API offers access to discover system-related information and capabilities.

This snippet requires `ReadDeviceData` capabilities. **Self-signing** is not possible, a Developer certificate is needed to sign application for testing.

Prerequisite

- Install Qt for Symbian:Installing Qt on Symbian
- Install QtMobility APIs:Setting up environment for Qt Mobility API

Headers required

```
#include <qsysteminfo.h>
```

.pro file

Modify your **.pro** file as follows.

```
QT += core \
    gui \
    network
INCLUDEPATH += d:/qtmobility/src/systeminfo
INCLUDEPATH += D:/QtMobility/src/global

CONFIG += mobility
MOBILITY = systeminfo
symbian:TARGET.CAPABILITY = ReadDeviceData
```

Header file

```
/* GetSystemInfo.h */

#ifndef GETSYSTEMINFO_H
#define GETSYSTEMINFO_H

#include <QtGui/QMainWindow>
#include <qsysteminfo.h>

QTM_USE_NAMESPACE;

class QListWidget;
class QScrollArea;

class GetSystemInfo : public QMainWindow
```

```
{
    Q_OBJECT

public:
 GetSystemInfo(QWidget *parent = 0);
    ~GetSystemInfo();

private:
 //void resizeEvent (QResizeEvent* event);
 void setWidgetGeometry(QSize* screenSize);
 void getSystemInformation();

private:
    QSystemInfo     *sysInfo;
 QListWidget     *listWidget;
 QScrollArea     *scrollArea;
};

#endif // GETSYSTEMINFO_H
```

Source file

```
/* GetStorageInfo.cpp */

#include "GetSystemInfo.h"
#include <QListWidget>
#include <QScrollArea>

GetSystemInfo::GetSystemInfo(QWidget *parent)
    : QMainWindow(parent)
{
 setWindowTitle("Get system information");

 /*The sysInfo becomes a child of the GetDisplayInfo, and will be destroyed when the
GetDisplayInfo is deleted */
 sysInfo = new QSystemInfo(this);

 /* To show items in list view */
 listWidget = new QListWidget();
 listWidget->setObjectName(QString::fromUtf8("listWidget"));

 /* To make UI scrollable */
 scrollArea = new QScrollArea();
 setWidgetGeometry(&(size()));

 /* scrollArea takes ownership of the listWidget, so no need to delete it */
 scrollArea->setWidget(listWidget);
 scrollArea->setAlignment(Qt::AlignLeft);
 scrollArea->setWidgetResizable(true);

 /* QMainWindow takes ownership of the scrollArea, so no need to delete it */
 setCentralWidget(scrollArea);
 getSystemInformation();
}
