Trying to set color a scheme (palette) does not have any effect because the feature is not supported in S60 3rd Edition.

Description

The Extensions plug-in package for S60 3rd Edition SDK 🔗 contains the Personalization and Skin Setting API with the Central Repository key for controlling the current color scheme.
However, changing the value of this key does not have any effect because UI color schemes are not supported in S60 3rd Edition.

How to reproduce

```
#include <centralrepository.h>
#include <AknSkinsInternalCRKeys.h>

CRepository* cenRep = CRepository::NewLC( KCRUidPersonalisation );
TInt value = 0;     // 0: Nokia "Classic" blue
//Try to change the color scheme
User::LeaveIfError( cenRep->Set( KPslnColorPalette, value ) );
CleanupStack::PopAndDestroy(); // cenRep
```

Solution

No solution available.
