Help:Templates/Internal

This topic lists all internal templates (marked with the "InternalUse" template). These are not intended for use except by Nokia Developer Administration. There are 38 internal templates

Article	Abstract
Template:!	
Template:=	This internal template is used inside other templates to represent an = sign when an equals is not allowed
Template:Abstract HoverAbstract	Internal: This template displays Abstract HoverText, if an abstract is defined. It is used in some DPL - see Sandbox/Hamishwillee/DPLTests
Template:Abstract.default	This template is called if a DPL query attempts to include an article which has no Abstract. The template displays nothing if there is no abstract
Template:Abstract:1.default	This template is used by DPL in Sandbox/Hamishwillee/PotentiallyFeatured to display the case where an article has no abstract.
Template:AddPortalIcon.dpl.default	This template defines which portal signpost icons are added for portals linking to the current article. This should be maintained by wiki admin and is not for direct use (it is used through Template:RelatedPortals)
Template:Announcement.dpl	Internal:This template is used by Template:Announcement as phantom template to display the table of information from all the topics that use the Announcement template.
Template:Announcement.dpl.default	Internal:This template is used by Template:Announcement as phantom template to display the table of information from all the topics that use the Announcement template. Not quite sure why required. -
Template:ArticleMetaData.dpl	Internal:This template is used by Template:ArticleMetaData as phantom template to display the table of information from all the topics that use the ArticleMetaData template.
Template:ArticleMetaData/default	This template is used by Template:ArticleMetaData to provide a default (English) translation.
Template:ArticleMetaData/id	This template is used by Template:ArticleMetaData to provide the Bahasa Indonesia translation.
Template:ArticleMetaData/ru	This template is used by Template:ArticleMetaData to provide a Russian translation. You should not use this directly, but instead use Template:ArticleMetaData specifying the *language* parameter
Template:ArticleNeedsUpdate.dpl	Internal:This template is used by Template:ArticleNeedsUpdate as phantom template to display the table of information from all the topics that use the ArticleNeedsUpdate template.
Template:CategoryInformation	This is an experimental template for providing boilerplate standard "category page lists".
Template:Deprecated	Apply this template to articles that have been replaced by off-wiki library/official content in order to provide a clear signpost to the new material. Unlike Template:Archived the content is still searchable. After some time the content can then be archived.
Template:Deprecated.dpl	Internal:This template is used by Template:Deprecated as phantom template to display the table of information from all the topics that use the Template:Deprecated template.
Template:FA Menu	
Template:FA Menu Portuguese	
Template:FV Menu	
Template:GetAbstract2	Testing only. Gets the abstract/short description for a specified page
Template:HamishW	This is a version of Template:CommentInArticle that has been customised for use by hamishwillee (only!)
Template:Influencer	This is a version of Template:CommentInArticle that has been customised for use by influencer (only!)
Template:InfoBoxRightHandSide	Base template for right aligned fix-sized information boxes

Template:ListMostViewed	Lists most viewed articles in specified categorie(s)
Template:NFC Code Examples Note	This internal template is used to provide common warning text for NFC examples that were tested on S40 devices and which may not work on S60 devices
Template:NeedsMoreWork.dpl	Internal:This template is used by Template:NeedsMoreWork as phantom template to display the table of information from all the topics that use the NeedsMoreWork template.
Template:Nokia Published	INTERNAL - CURRENTLY UNUSED - action to check if is required
Template:Nokia SDK for Java	This template is used to display information about the latest Java SDK. A template is used because this notification could be used in a number of category pages and topics
Template:QtSDKLatestVersionAnnouncement	This template is used to display information about the latest Qt SDK. A template is used because this notification is used in a number of Qt category pages and topics
Template:RandomMostViewedList	This template returns a random "most viewed" list. It is used on wiki home page to show an arbitrary set of most viewed topics.
Template:RandomSelector	This template returns a "random" item from the set specified in as parameters
Template:RandomWikiHomeCategory	This template returns a random category, used to define the categories on front page of wiki.
Template:RelatedPortals	This template lists portal pages which link against the current (or specified) page.
Template:ReviewerApproved.dpl	Internal:This template is used by Template:ReviewerApproved as phantom template to display the table of information from all the topics that use the ReviewerApproved template.
Template:SDKVersionAnnouncement Series40WebTools	This template is used to display information about the latest Web Tools. A template is used because this notification could be used in a number of category pages and topics
Template:Sandbox4	This template is used by Template:ArticleMetaData to provide a default (English) translation.
Template:UnderConstruction.dpl	Internal:This template is used by Template:UnderConstruction as phantom template to display the table of information from all the topics that use the UnderConstruction template.
Template:VersionCategoryMetadata	This template displays the "version categories" of an article in a list. It is intended to be used in ArticleMetaData as a formal list of compatibility (ie internal).
