Help:Templates/Under Construction

This topic lists all templates that are incomplete, as indicated by the presence of the "UnderConstruction" template. There are 31 templates under construction

Article	Abstract
Template:Abstract.dpl.default	This template is default displayed if no abstract is present.
Template:ArticleCountByCategory	Gets the number of articles in the specified categorie(s)
Template:ArticleMetaData/pt	Este modelo de artigo em Português deve ser usado para que os artigos tenham as seguintes informações: nome do autor, data/hora de criação do artigo, a que plataformas o artigo se aplica, quando foi feita a última revisão, que exemplos de código são relacionados, e quais são as palavras-chave e categorias principais. O objetivo é substituir o modelo CodeSnippet.
Template:ArticleMetaData/zh-hans	This template is a Chinese translation of Template:ArticleMetaData. It should not be used directly, instead call ArticleMetaData with parameter language equal to Lang-Chinese
Template:ArticleMetaData=	This template ...
Template:AwardInfoBox	This template is base class for article "awards" - featured articles, reviewer approved etc. Awards are displayed in the top right corner of the article
Template:BookData	This template is used for formatting book information in Category:Books
Template:Competition	This template is used to mark and track competition status.
Template:FeaturedArticle.dpl	This template is used in dynamic listings of Template:FeaturedArticle (e.g. in Featured Article list) to display the timestamp information
Template:LanguageCategoryPageProxy	This template creates a "pseudo" category page. It is intended to allow us to create category pages for other languages, without having to use real non-English category names
Template:Licence MIT	This template is used to apply the MIT licence to a file upload.
Template:ListFeaturedArticles	This template is for displaying the featured articles of a particular category.
Template:ListKnowledgeBaseArticles	Lists Knowledge Base articles in specified categorie(s)
Template:ListRecentlyCreated	Lists recently created articles
Template:ListRecentlyEdited	Lists recently edited articles in specified categorie(s)
Template:PlatformCategoriesJavaME	This template is for listing all Java ME categories in a DPL filter - used globally where a platform filter is needed.
Template:PlatformCategoriesNokiaX	This template is for listing all NokiaX categories in a DPL filter - used globally where a platform filter is needed.
Template:PlatformCategoriesWindowsPhone	This template is for listing all Windows Phone categories in a DPL filter - used globally where a platform filter is needed.
Template:RelatedPortals.dpl.default	This template is used in list generation (internally) of articles that have Related portals. It is part of test code in Sandbox/Hamishwillee/Scratchpad2
Template:Result	This template is to force a DPL page value to be treated as a string - it just returns whatever is passed in. EXPERIMENTAL.
Template:Sandbox	Lists recently edited articles in specified categorie(s)
Template:Sandbox.dpl.default	This template being used by another (testing only). Do not use. Testing if string parser functions can execute in context of a DPL format statement
Template:Sandbox2	This template creates a "pseudo" category page. It is intended to allow us to create category pages for other languages, without having to use real non-English category names
Template:Sandbox2.dpl.default	This template is for testing DPL expansion of variables.
Template:Sandbox3	Lists recently edited articles in specified categorie(s)
Template:Semicolon	This template imports a semicolon - testing whether can use this inside DPL which is otherwise broken
Template:SignpostBox	This template creates a "signpost" which is used on some key portal pages as a visually attractive high level link to more detailed resources.
