Archived:Deploying an S60 3rd Edition application over the air (Known Issue)

Archived: This article is **archived** because it is not considered relevant for third-party developers creating commercial solutions today. If you think this article is still relevant, let us know by adding the template {{ReviewForRemovalFromArchive|user=~~~|write your reason here}}.

Issue applies to out of scope platform versions.

Description

In S60 3rd Edition, the MIME type of Symbian C++ applications (including S60 themes) configured on a Web server is different than in S60 1st and 2nd Edition. Below is the relative configuration:

- S60 3rd Edition: x-epoc/x-sisx-app (*.sisx)
- S60 1st & 2nd Edition: application/vnd.symbian.install (*.sis)
