NOKIA Developer

Archived:DevCertRequest

Archived: This article is **archived** because it is not considered relevant for third-party developers creating commercial

solutions today. If you think this article is still relevant, let us know by adding the template
{{ReviewForRemovalFromArchive|user=~~~~|*write your reason here*}}.

This tool is no longer used. Developer Certificates are requested directly through the site.

The DevCertRequest tool is a windows hosted tool for creating a file that can be used to request Developer certificate from
www.symbiansigned.com 🔒.

The user enters details about the certificate to be created into the tool, which then produces a *.csr file which can be uploaded to
the Symbian Signed website to request a certificate.

The tool can be downloaded from here: Symbian DevCert Request Tool for Windows as a stand-alone application.

Note: Historically there was also a plugin version for Carbide. This version was not maintained and is no longer available.
