

# Archived:Show error message using QMessageBox

---

 Archived: This article is **archived** because it is not considered relevant for third-party developers creating commercial solutions today. If you think this article is still relevant, let us know by adding the template `{{ReviewForRemovalFromArchive|user=~~~~|write your reason here}}`.

Qt Quick should be used for all UI development on mobile devices. The approach described in this article (based on [QWidget](#)) is deprecated.

This code snippet shows how to display error messages in application using `QErrorMessage` class. This type of error message has a checkbox to allow the message to be dismissed permanently (should the error occur again).

## Headers required

---

```
#include <QErrorMessage>
```

## Source Code

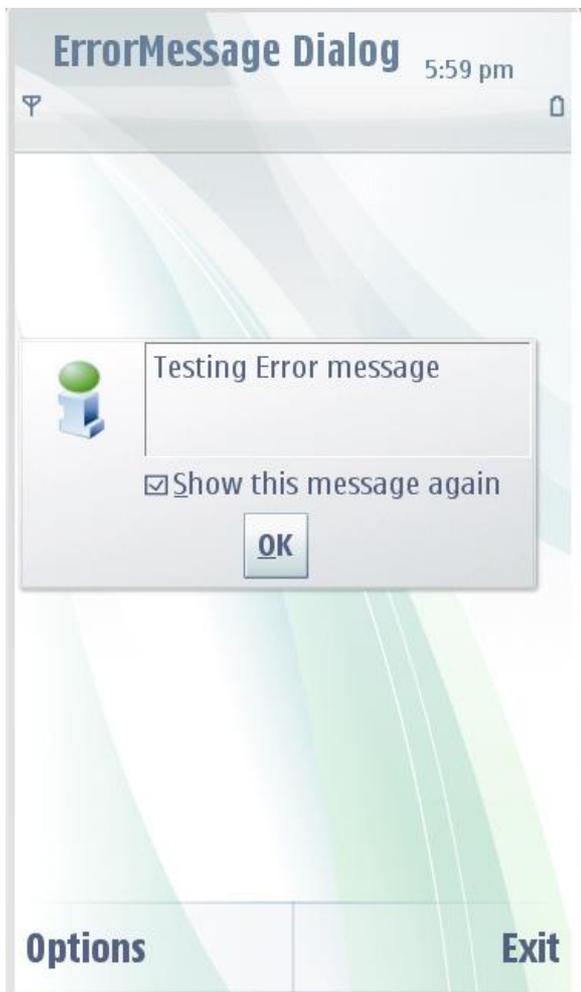

---

```
QErrorMessage errorMessage;  
errorMessage.showMessage("Testing Error message");  
errorMessage.exec();
```

## Postconditions

---

The code snippet is expected to show error message dialog on screen.
