Description

Starting a MMAPI Player crashes the Camera MIDlet in certain S60 3rd Edition, Feature Pack 2 devices which use specific firmware (for more details, see 'Devices' above).

On the affected devices, this can be reproduced by using the following code for a Camera MIDIet:

```
Player p = Manager.createPlayer("capture://video");

p.realize();
p.prefetch();
videoControl = (VideoControl) p.getControl("VideoControl");
......
videoControl.setVisible(true);
p.start(); // Starts the Player which crashes the Camera MIDlet
```

Solution

No solution exists for the affected devices.
