Portal:Java Networking Articles

This portal contains Java ME articles related to Networking.

- Creating a Patient-Doctor Monitoring System for Asha Devices . . arunkam
- HTTP digest access authentication in Java ME . . jappit
- HTTP basic access authentication in Java ME . . jappit
- Phone Setting API on the Asha software platform . . jappit
- Network State API for Java ME . . jappit
- Nokia notifications on the Asha software platform . . jappit
- How to use HTTP GET request in Java ME . . skalogir
- Fetching data from server using Java ME . . cadlg
- How to use HTTP POST request in Java ME . . grift
- J2ME clients for JSON services made easy: the complete implementation . . pooja_1650
- Using HTTP proxy with Java MIDlets in Nokia Series 40 devices (from 2nd Edition onwards) . . skalogir
- Multiple HTTP headers of the same type cannot be handled (Known Issue) . . skalogir
- HTTP Post multipart file upload in Java ME . . NoridaSrk
- MIDP Networking - web server and MIDlet interaction with example . . marcelobarrosalmeida
- How to send POST data to a web server . . sjafarhussain

- Nokia notifications on the Asha software platform
- HTTP Post multipart file upload in Java ME
- How to obtain mobile IP address in Java ME
- J2ME clients for JSON services made easy: the complete implementation
- Phone Setting API on the Asha software platform
- Using HTTP and HTTPS in Java ME
- Fetching data from server using Java ME
- Developing a 2D game in Java ME - Part 7
- How to use HTTP POST request in Java ME
- How to send POST data to a web server
- Bit Input/Output Stream utility classes for efficient data transfer
- How to use HTTP GET request in Java ME
- HTTP digest access authentication in Java ME
- How to encode URL in Java ME
- Creating a Patient-Doctor Monitoring System for Asha Devices

- Creating a Patient-Doctor Monitoring System for Asha Devices . . arunkam
- HTTP digest access authentication in Java ME . . jappit
- HTTP basic access authentication in Java ME . . jappit
- Phone Setting API on the Asha software platform . . jappit
- Network State API for Java ME . . jappit
- Nokia notifications on the Asha software platform . . jappit
- J2ME clients for JSON services made easy: the complete implementation . . marcelobarrosalmeida
- SocketConnection is terminated with IOException when access point is disconnected (Known Issue) . . Kbwiki
- How to make a network connection using a selected Destination Network in J2me . . ektasrv
- How to make a network connection using a selected Access Point in Java ME . . ektasrv
- How to list other applications preferred access points in Java ME . . ektasrv
- How to get the last-used Access Point in Java ME . . ektasrv
- How to get all Access Points in Java ME . . ektasrv
- Memory leak may occur when data is sent in large chunks in S60 (Known Issue) . . Kbwiki
- MIDP Networking - web server and MIDlet interaction with example . . Maveric

- Phone Setting API on the Asha software platform . . jappit
- Network State API for Java ME . . jappit
- Nokia notifications on the Asha software platform . . jappit
- J2ME clients for JSON services made easy: the complete implementation . . pooja_1650

- Developing a 2D game in Java ME - Part 7 . . Symbian_Neil

Articles

B

- Bit Input/Output Stream utility classes for efficient data transfer

C

- Cannot set VPN access point for MIDlet using S60 Application manager (Known Issue)
- Creating a Patient-Doctor Monitoring System for Asha Devices

D

- Developing a 2D game in Java ME - Part 7

F

- Fetching data from server using Java ME

H

- HTTP Post multipart file upload in Java ME
- HTTP basic access authentication in Java ME
- HTTP digest access authentication in Java ME
- How to close a network connection in Java ME
- How to encode URL in Java ME
- How to get all Access Points in Java ME
- How to get the last-used Access Point in Java ME

H cont.

- How to list other applications preferred access points in Java ME
- How to make a network connection using a selected Access Point in Java ME
- How to make a network connection using a selected Destination Network in J2me
- How to obtain mobile IP address in Java ME
- How to send POST data to a web server
- How to use HTTP GET request in Java ME
- How to use HTTP POST request in Java ME

J

- J2ME clients for JSON services made easy: the complete implementation

L

- Limitation on using ':' character in Series 40 (Known Issue)

M

- MIDP Networking - web server and MIDlet interaction with example
- Memory leak may occur when data is sent in large chunks in S60 (Known Issue)
- Multiple HTTP headers of the same type cannot be handled (Known Issue)

N

- Network State API for Java ME
- Network indicator not shown in S60 5th Edition devices (Known Issue)
- Nokia notifications on the Asha software platform

P

- Phone Setting API on the Asha software platform

S

- Series 40 network configuration
- Session management in Java ME
- SocketConnection is terminated with IOException when access point is disconnected (Known Issue)
- Status code not sent when cancelling MIDlet download (Known Issue)

T

- The Factory pattern in MIDP 2.0

U

- Using HTTP and HTTPS in Java ME
- Using HTTP proxy with Java MIDlets in Nokia Series 40 devices (from 2nd Edition onwards)

C

- Como codificar a URL em Java ME
- Como enviar dados de POST para um servidor web
- Como receber uma imagem do servidor
- Como usar a solicitação HTTP POST em Java ME
- Como utilizar requisições HTTP GET em JavaME

G

- Gerenciamento de sessão em Java ME

T

- Tantalum跨平台库介绍

使

- 使用J2ME的HTTP Post方式之多段文件上傳

网

- 网络图片资源处理

D

- Descargando datos desde un servidor usando Java ME

M

- Mengatasi ‘Resource limit exceeded for TCP client sockets’ Exception pada Java ME

A

- Access Point Name configuration for Series 40 1st, 2nd, 3rd Edition
- Access Point is queried repeatedly in certain S60 3rd Edition FP1 (Known Issue)
- Adding a service access point as a selectable item in the Preferred AP list on the Nokia 3220
- Always allowed setting not available for network access and application autostart in trusted 3rd-party domain MIDlets (Known Issue)
- Calling HTTPSConnection.getSecurityInfo() method crashes the MIDlet (Known Issue)
- Configuring preferred Internet access point in Nokia 3220 (Known Issue)
- Java ME getHeaderField("Location") returns null in S60 1st and 2nd Edition devices (Known Issue)
- KNIEXT NewGlobal Ref failed (Known Issue)

A cont.

- Lack of thread safety in Java ME TCP implementation on Series 40 1st and 2nd Edition (Known Issue)
- MIDlet crashes with buffer overflow when creating an HTTP connection (Known Issue)
- MIDlet hangs while trying to perform cookie-based communication with a server (Known Issue)
- MIDlets do not use the same access point settings as the integrated browser (Known Issue)
- Network connection is not switched off after using UDPDatagramConnection via MIDlet (Known Issue)
- No access option in Nokia 6680 (Known Issue)
- Nokia N70, N72, and N90 do not prompt any unhandled exception notifications when SocketConnection fails (Known Issue)
- Panic in S60 3rd Edition FP1 devices if the Set-Cookie header is empty (Known Issue)

A cont.

- Repeating socket connections with default access point result in Out of Memory exception in the Nokia N95 (Known Issue)
- S60 3rd Edition devices may crash when receiving an HTTP cookie greater than 1 kB (Known Issue)
- SSL handshake is done for every HTTPS connection that is made on S60 2nd Edition early firmware (Known Issue)
- SSL handshake is done for every HTTPS connection that is made with Nokia 6230 (Known Issue)
- SecureConnection with SSL connection string fails in Symbian^3 (Known Issue)
- System property "microedition.hostname" returns localhost (Known Issue)
