NOKIA Developer

Category:Development Tool

The Development Tool category is intended to group together applications which can be used as tools in the software development cycle. They can be full-blown commercial tools or small utilities contributed by developers.

It is desirable that pages marked with this category to direct the readers to the vendor's or developer's product pages rather than uploading files on the wiki. This helps the developer keep track of the tools downloads and usage as well as helping the reader to always have access to the latest version of the tool.
