Week 52 - December 25th 2011

The media player is loading...

Hubert Ng, Director Ecosystem and Developer Experience (EDX) at Nokia, China along with a number of attendees provide an overview of the Qt Developer Conference that was held in

Beijing in December 2011.

The video showcases the event, which was the most well-attended Qt community event ever held with nearly 1,100 developers in attendance, demonstrating the depth and breadth of Qt development activities across desktop, embedded and mobile development.

Hubert Ng also discusses the future of Qt from Nokia's perspective; that Nokia will make Qt core to building applications that connect the next billion users to the internet.

Week 51 - December 18th 2011

Cristian and Adriana started creating apps when they took part in a local Qt developer contest. They quickly fell in love the Qt SDK, because, as Cristian puts it, they can create killer apps in just a few hours. They particularly like QML and its rich feature that enable sophisticated UIs to be created easily. Adriana is also impressed by its cross-platform capabilities, as she notes that moving a small app from Symbian to Nokia N9 can be done in a couple of hours. In ramping up their development effort, the support from Nokia, both through the Nokia Developer website and from the local Nokia team, has been invaluable in understanding needs and requirements of both global and local markets.

Week 50 - December 11th 2011

The media player is loading... David Slocombe, Head of Mobile at lastminute.com, introduces the Hotels app for Qt-powered Symbian phones. After showcasing the app, David explains that users were having difficulty using the lastminute.com website on a mobile browser. By delivering the app using Qt, they now offer a great mobile UX and have opened up new markets in the process. Matthew Gaunt, Developer at Future Platforms, then talks about using the Qt SDK. Among the many features of the technology Matthew praises, he notes that the Qt Mobility APIs enabled sophisticated mapping features to be added to the app with "relatively few lines of code".

Week 49 - December 4th 2011

The media player is loading... Houman Forood, Senior Product Marketing Manager at Nokia provides a guide to the UI improvements that have been introduced in the latest Series 40 web apps environment. You will see many improvements since the initial release. Houman also explains that new UI guidelines are available to assist you in designing web apps for Nokia Series 40 phones.

Week 48 - November 27th 2011

This promotional video, from Nokia Developer, captures the excitement and enthusiasm for Nokia's stunning new Lumia hardware running the latest version of Windows Phone. Offering developers the ability to be Amazing Everyday, grow their apps' reach, and realise new business opportunities: Nokia with Windows Phone delivers the tools developers know and trust, combined with the local support and training only Nokia can deliver. So dive right in and get started at developer.nokia.com/windowsphone

Week 47 - November 20th 2011

The media player is loading... Houman Forood, Senior Product Marketing Manager at Nokia continues to discuss the new features in the recently released Nokia Web Tools 1.5 and updated web apps capabilities in Nokia Browser for Series 40. You can now take advantage of geolocation, native messaging, and other features to build rich applications using your web development skills. Watch this video to learn about the options available to you! For more information, visit: http://www.developer.nokia.com/series40webapps

Week 46 - November 13th 2011

The media player is loading...

Mike Arvela, Lead Developer at Futurice, walks through the steps for implementing In-Application Purchasing for Java MIDlet applications.

Week 45 - November 6th 2011

The media player is loading... Brandon Watson, Senior Director of Windows Phone, attended Nokia World - and shares his excitement on the developer opportunities with WP7.5 - as he says "get started, get noticed, get paid". With unique platform features such as App Connect and Live Tiles, we are excited too!

Week 44 - October 30th 2011

The media player is loading...

40 Developers from around the globe squared off at Nokia World 2011 in London, to compete in this year's Hackathon competition. Developers had a mere 40 hours to create their app from an idea submitted to the Nokia IdeasProject, and they then had the opportunity to submit their app for use on up to three platforms:

Windows Phone, Qt, and Series 40. The winners of this year's Hackathon will share more than 150,000 euros in cash and prizes the winning app from Visiarc receives 50,000 euros.

Week 43 - October 23rd 2011

The media player is loading... Nick Bicanic, founder and CEO, and Andrew Wanliss-Orlebar, founder and head of product, at echoecho demonstrate the echoecho app and talk about development using Qt SDK. echoecho is a global location sharing system that enables people to find their friends anywhere in the world, then chat or arrange to meet. The company launched the app simultaneously on most major smartphone platforms. This gave Nick a unique opportunity to compare development environments: Nick found Qt SDK to be a 'breath of fresh air' and easy to use, noting that a working version of the app was created in just two weeks. Of the Qt tools and technology, Nick pays particular attention to the maps capability offered through Qt Mobility. This enabled him to add a fully functioning map to echoecho with only a few lines of code.

Week 42 - October 16th 2011

The media player is loading... Houman Forood, Senior Product Marketing Manager for Nokia discusses this year's contest called "Create for Millions" where developers can win their share of cash and prizes worth one million euros for the best Series 40 Java and web apps published to the Nokia Store. This contest invites developers to show off their creativity in delivering compelling apps for the next billion. Entries to the contest must be submitted by 1 November 2011. Please visit http://www.developer.nokia.com/create4millions/ for details.

Week 41 - October 9th 2011

The media player is loading... Nokia hosted a celebration to announce the winners of the Calling All Innovators \$10M contest and turn the spotlight on our most important collaborators, you the developer. Fellow Nokia and Windows Phone developers, as well as members of the Nokia North America team, local VCs, media, and operators attended to celebrate the industry and its achievements.

Week 40 - October 2nd 2011

The media player is loading... Conor Lennon, a project manager at Symbio talks about their experience porting Lola's Fruit Shop Sudoku, an iOS game for children by the game studio BeiZ, to Qt, Symbian and Nokia N9 smartphones. Conor notes that it took only four weeks from start to finish for one developer to port the game to Qt. He also describes the ease and quickness that Qt Quick played in the success of this porting project.

Learn more about app porting at: http://www.developer.nokia.com/Develop/Porting/

Week 39 - September 25th 2011

The media player is loading... Qt Developer Days is the only event where you can learn directly from the developers who make Qt and from experienced Qt partners how you and your employer can make better use of Qt and the Qt SDK. Join us in Munich (October 24-26th) and San Francisco November (29th-December 1st)!

Week 38 - September 18th 2011

The media player is loading... Nokia Car Mode Makes it easier for drivers and passengers to access maps, satellite navigation (provided by Nokia Drive), traffic updates, music and voice calls when they are in vehicles, so there's no need for a separate music player or satnav. Smartphone features and services are designed and displayed to optimise the usability in the car and avoid driver distraction.

Week 37 - September 11th 2011

The media player is loading...

Lina Udovenko — LiveJournal marketing director, SUP Media — talks about the capabilities of the LiveJournal app on the Nokia N9 smartphone. She is joined by Mikhail Nosov — principal software developer, Teleca — who explains that the app was first developed for Symbian then ported to the N9, with 95% of the code unchanged.

The video also gives more information about QML, noting it's three times faster than using C++ to create a UI and offers more features, such as transitions. Lina concludes, noting that Nokia phones offer a great opportunity for LiveJournal to reach a mainstream audience.

Week 36 - September 4th 2011

The media player is loading...

This is a tutorial which shows how to create a QtQuick3D application. It's about displaying flat tires, open doors and controlling the windows.

Week 34 - August 21st 2011

The media player is loading...

Li Wenjing, product manager at Kaixin Mobile Division, talks about the mobile version of Kaixin for the Nokia N9 smartphone. Kaixin is a social networking service that enables users to share details of their daily lives along with photos and messages. Then, Zhang Xiaoyong, an engineer at Accenture, explains that the application took three developers about two months to create using Qt.

Week 33 - August 16th 2011

The media player is loading...

HeroCraft, leading mobile game publisher based in Russia with over 20 million downloads on Nokia Store, tells us about their experience with Nokia Developer services and the upcoming Java games for Nokia Series 40 devices.

Week 32 - August 7th 2011

The media player is loading...

Patric Nordström, CEO of Idevio tells us about Locago, an exciting new map browser app that features directions, multiple information overlays, and real-time dynamic content updates that has found tremendous success through Nokia's Nokia Store. The app has been downloaded more than six million times in more than 190 markets worldwide.

Week 31 - July 31st 2011

The media player is loading...

Florian Angulanza, CEO of UTILO, is talking about the Film.at application using the Qt SDK. Film.at is a application that gives you the latest infos and news on movies and cinemas. You can watch trailers and many more. It is the largest database for films with more than 8.000 movies. The Film.at app can be downloaded from the Nokia Store: here \$\\^{\text{\text{P}}}\$

Week 30 - July 25th 2011

The media player is loading...

This video features Windows Phone Partners discussing the opportunities and experiences building applications with Windows Phone.

Week 29 - July 17th 2011

The media player is loading...

The video features Qt Quick Components on an Nokia N8. More info and downloads here &.

Week 28 - July 10th 2011

The media player is loading...

Michael Samarin, Head of Mobile Development at Futurice, talks about the Nokia Trailers and Transformers 3 apps they developed using Qt and QML. Both apps were developed for Nokia's new Symbian smartphones, and focus on tightly integrating a clean and intuitive user experience. Both apps are available for download in Nokia's Nokia Store.

Week 27 - July 3rd 2011

The media player is loading...

Louis Gump, VP CNN Mobile at CNN, talks about the creation of the CNN app for Nokia phones. This app provides for not only headlines with in depth reports, but video content as well as enabling its users to provide news updates through CNN iReport.

Development was undertaken with Qt SDK and Louis explains how it provides for quick, flexible, collaborative development that enables an iterative process that results in "yes, we got it" outcomes.

Week 26 - June 26th 2011

The media player is loading...

Create a QML application that features 3D content - download our new packages for Symbian^3, Maemo5 and other platforms. Since this is still under development, we hope to get some useful feedback about functionality of *Qt Quick 3D* so that we can improve it. More details available here .

Week 25 - June 19th 2011

The media player is loading...

A demonstration of what the QML Scene Graph is all about, implemented in QML. More details

available here .

Week 24 - June 12th 2011

The media player is loading...

This video demos a simple system for holding presentations, written in plain QML/JavaScript. More information and source code is available here \$\mathbb{G}\$.

Week 23 - June 5th 2011

The media player is loading...

Wilhelm Taht, marketing director, and Juha Turunen, senior software specialist, of Digia talk about the development of Flowd using the Qt SDK 1.1. Flowd is a location aware application that enables a social network for music lovers. The development only took Juha about six weeks, which included learning how to use Qt Quick from scratch.

Week 22 - May 29th 2011

The media player is loading...

Alexander Kluwe, UI designer and project manager at Futurice, talks about the development of 90elf using the Qt SDK 1.1. 90elf is an application that enables users to listen to live commentaries on German football matches. The application took Alexander and a Qt developer only 30 days to create.

Week 21 - May 22nd 2011

The media player is loading...

Nokia Smart Installer for Symbian is a deployment solution that ensures that installed 3rd party applications have always access to the required versions of their dependent libraries. Lucian Tomuta talks how to utilize the Smart Installer in the Qt application.

Week 20 - May 15th 2011

The media player is loading...

This video provides a short demonstration of how to use custom components in Qt Quick Designer 2.2and shows the created app on an N8. Details are available at http://labs.qt.nokia.com/2011/05/05/qt-quick-designer-in-qt-creator-2-2/19

Week 19 - May 8th 2011

The media player is loading...

Christian D. Kamm, software engineer at Qt Development Frameworks, Nokia, introduces the new features delivered in the Qt SDK 1.1 . Christian discusses the capabilities of Qt Quick and the Qt Mobility APIs. In addition, developers from Digia and Futurice talk about their experiences using the Qt SDK 1.1 .

Week 18 - May 1st 2011

The media player is loading...

This video, introduced by Mark Selby - VP Sales and Industry Collaboration, Nokia — provides an overview of Nokia's presence at WIMA , one of the most significant NFC events. A number of developers show their NFC apps running on Nokia C7 with Symbian Anna.

For more information and resources on NFC check out [[About NFC|http://www.developer.nokia.com/NFC 4]

Week 17 - April 25th 2011

The media player is loading...

The people at Poken present their application, which enables users to make use of NFC technology by transferring social business cards and reading NFC tags embedded in a variety of objects, from posters to menus. Perhaps the most important thing to note is that the app was developed using Qt.

Week 16 - April 17th 2011

The media player is loading...

The new Nokia Web Tools delivers the ability to create rich Series 40 web apps. By offering a compelling user experience, developers can create stickiness in ways that have not been possible before. In this video, developers from around the world describe their experience creating Series 40 web apps for distribution to consumers -- finding ways to connect with the next billion.

Week 15 - April 10th 2011

The media player is loading...

In this video Jesus Ruiz, technical marketing manager at Nokia, explains how Java ME apps are the way for developers to reach the mass market by leveraging the Series 40 platform.

Jesus also explores the latest evolution of the Series 40 platform that introduces the innovative Touch and Type UI. This UI combines the simplicity of a touch screen with the convenience of a keypad. Two new APIs enable the detection of gestures performed on the touch screen and calculate parameters for dynamic scrolling and linear animations

Week 14 - April 3rd 2011

The media player is loading...

This video demonstrates how to set up a development suite for a community port of Qt to Android. More info on this project can be found here $\[\]$.

Week 13 - March 27th 2011

The media player is loading...

This video demonstrates how you can use Qt quick components for the desktop. For more information about this project, please refer to the relevant blog post here ፟፟.

Week 12 - March 20th 2011

The media player is loading...

A simple game application which is built using new Qt SDK 1.1 Beta. In order to test QML power, this game application has avoided writing any C++ code. The engine is written entirely in JavaScript, and has no more than 300 lines of code (including comments). Read more from here: The Flying Bus Game 4

Week 11 - March 13th 2011

The media player is loading...

Few things express the power and ease of use that benefit Qt Quick as well as this video does. Created using the new Qt SDK 1.1 Beta, DoodleDrive is available from the wiki.

Week 10 - March 6th 2011

The media player is loading...

Henry takes us through some new Qt WebKit and HTML integration at Mobile World Congress

Week 9 - February 27th 2011

The media player is loading...

Matt Bencke, General Manager of Windows Phone and Marketplace, discusses the planned Nokia/Microsoft partnership, and the opportunities for the developer community today and in the future.

Week 8 - February 20th 2011

The media player is loading...

This video introduces a Twitter Client made with QML. The app is free and available here for download and for further development as well: QtQuickTwitterExample.zip Side note: The QML Viewer is a tool for testing and developing QML applications. It is not intended for use in a production environment and should not be used for the deployment of QML applications. All commercial Qt Quick apps should be packaged as Qt applications.

Check out the latest Qt SDK here: http://www.developer.nokia.com/Develop/Qt/Tools/ № .

Week 7 - February 13th 2011

The media player is loading...

This video describes the usage of the States and transitions of Qt Quick. Find out more here: http://www.developer.nokia.com/Develop/Qt/ . Side note: The QML Viewer is a tool for testing and developing QML applications. It is not intended for use in a production environment and should not be used for the deployment of QML applications. All commercial Qt Quick apps should be packaged as Qt applications.

Check out the latest Qt SDK here: http://www.developer.nokia.com/Develop/Qt/Tools/ ₺.

Week 6 - February 6th 2011

The media player is loading...

This video describes the usage of the Qt Quick Components. Find out more here:

http://www.developer.nokia.com/Develop/Qt/ . Side note: The QML Viewer is a tool for testing and developing QML applications. It is not intended for use in a production environment and should not be used for the deployment of QML applications. All commercial Qt Quick apps should be packaged as Qt applications.

Check out the latest Qt SDK here: http://www.developer.nokia.com/Develop/Qt/Tools/ №.

Week 5 - January 30th 2011

The media player is loading...

This video describes the usage of the QML Elements. Find out more here:

http://www.developer.nokia.com/Develop/Qt/ &

Week 4 - January 23rd 2011

The media player is loading...

What is Qt Quick? See a brief introduction and then find out more here:

http://www.developer.nokia.com/Develop/Qt/ . Side note: The QML Viewer is a tool for testing and developing QML applications. It is not intended for use in a production environment and should not be used for the deployment of QML applications. All commercial Qt Quick apps should be packaged as Qt applications.

Week 3 - January 16th 2011

The media player is loading...

Miro Beran, an Android developer talks with us about developing apps for Nokia devices with

Week 2 - January 9th 2011

The media player is loading...

With a little over 6 months since the launch and having gone through many small and big improvements, Nokia Developer Projects is now out of the beta phase. The service is much now more complete in its features and also looks much better.

With more than 1000 developers as active members and 460 projects already, this service is becoming the best you can think for your open source projects. Why not take a look at couple of cool projects that have been running for a while? Nokia Developer Projects &

Week 1 - January 2nd 2011

The media player is loading...

More and more companies, including large telecom operators, are discovering the power of Qt, as proven by this Nokia Developer Interview with Rafel Uddin, Head of Device Development at Orange Labs UK. Rafel gives a demo of the Orange Wednesdays app on a Nokia N8 . He also discusses his experiences working with the Qt SDK.
